BEMKO

www.bemko.pl

Our office

Headquarters of BEMKO is located in Warsaw. The modern office and warehouse building located near the main national transport route provides a significant logistic potential. The fact that the high bay warehouse is located directly by the office considerably speeds up the order execution process. In end of 2016 BEMKO plan to open new HQ with spacious office, bigger warehouse, laboratory and production hall to be more comfortable both to the clients and employees of the company.

The major products in the BEMKO range of office lighting is the ZOLED panel as replacement for traditional fluorescent T5/T8 fixtures. It is provided with an integrated LED lighting source with the power from 15W- PLZ-033-150-4K till 45W- PLZ-066-450-6K or PLZ-123-450-4K, depending on the model. The high efficient LED chips and high-performance voltage transducer (95%) allowed the company to achieve high lighting efficiency of the complete fixture (up to 90 lm/W). Investors can choose from three colours of light with the colour temperature of 3000 K (warm white), 4000 K (neutral white) and 6000 K (cool white). The fact that the average life of the product is 40,000 h, with the loss of

luminous flux up to 30%, is an advantage since it reduces costs of maintenance during operation. Lack of sensitivity to frequent commutating cycles and immediate full power operation makes this product perfect for use with motion detectors. Zoled panel is available in several sizes from 30x30, 30x60, 30x120 till most popular 60x60. All models can be easily mounted in the Armstrong ceiling without any additional brackets. There are also available additional mounting brackets for surface and recessed mounting. For surface version we can mount it on 5cm brackets, 1m cord or frame. For recessed version the can choose the dry wall brackets.

Our products

In order to live up to its clients' expectations BEMKO Sp. z o.o. regularly introduces new products to its offer, paying particular attention to current market trends, technical requirements and design. At the moment BEMKO's offer encompasses over 800 products including in 5 product groups: modular devices, lighting fixtures, accessories, lighting sources and electrotechnical components. Vast range of products for the lighting industry includes for example modern LED-type light sources and lighting fixtures based on the SMD semiconductor technology.

The assortment of BEMKO lighting products focuses on their application in industry, services and commerce. The company provides designers and fitters with a wide selection of high quality and modern design internal lighting fixtures for offices, warehouse buildings, production plants, service facilities, shopping centres and public utility buildings. There is also a selection of products intended for outdoor areas with LED technology, such as highbays, floodlights, street lights and hermetic fixtures. Combine with accessories such as motion sensor can provide complete solution for professional lighting include energy saving and environment protection. The photometric data of the fixtures manufactured by BEMKO is available for computer-supported process of lighting system design. Lighting project can be done or by BEMKO technical employee or by Customer by them self's.

ECOline is BEMKO brand for light sources, which includes mainly LED semiconductor technology with the most popular Edison screw bases and with pin-type GU10, G9 bases adapted to the mains voltage 230V AC and G4 safety voltage 12V DC. Additionally, BEMKO offers decorative lighting in the form of elastic LED strips in various colours, with different tightness properties and possibility of their dynamic control. BEMKO light sources are designed in accordance with the most rigorous technical requirements which guarantee lower energy consumption.

About BEMKO

BEMKO is a producer of lighting and electrotechnical products, company with an established position on the Polish market. The company was founded in 2007, since then noting a systematic growth of participation in the production of lighting and electrotechnical equipment in the country and

abroad. We distribute our products in Poland, the European Union and in the eastern countries by means of developed wholesale chains, which are supported by regional sales managers.

Awards

Each award is an encouragement and mobilization for further work on continuous improvement and quality of both products and services. High standards of service and maintenance

companies were often rewarded, below the selected awards and recognitions:
